

Cosmetic Rhinoplasty

Rhinoplasty enhances the facial harmony and the proportions of your nose.

Rhinoplasty can modify:

- Nose size in relation to the face
- Nose width at the bridge or in the size and position of the nostrils
- Visible bumps or depressions on the bridge
- Nasal tip that is enlarged, drooping, upturned, or hooked
- Nostrils that are large, wide, or upturned
- Nasal asymmetry (keep in mind that everyone's face is asymmetric to some degree and results may not be completely symmetric)

Individuals with a medical condition that causes breathing impairment or other issues may benefit from seeing an Ear, Nose, and Throat Surgeon.

FAQs

Am I a good candidate for Rhinoplasty?

You may be a good candidate for rhinoplasty if you are physically healthy, do not smoke, and have a positive outlook as well as realistic goals for the enhancement of your appearance. It is also important that the growth of your facial structure is complete.

What should I expect after surgery?

Initial swelling will subside within a few weeks, however it may take up to a year for your new nasal contour to fully refine. You may notice gradual changes in the appearance of your new nose as it refines to a more permanent outcome.

How can I prepare for surgery?

Prior to your surgery it is recommended that you do not take any medications that may inhibit blood clotting or cause postoperative bleeding problems such as aspirin and ibuprofen. If you smoke, it is also recommended that you stop smoking at least a month before surgery and don't start again until a month afterward. Smoking greatly slows down the healing process. This may be a good time to quit smoking altogether.

How can I get a consultation?

A consultation is as easy as a phone call!
