# Avita Now Offers **AQUABLATION®** **THERAPY** for BPH

Aquablation therapy is an advanced, minimally-invasive treatment for benign prostatic hyperplasia, commonly known as enlarged prostate, that uses one-of-a-kind imaging, robotics, and a heat-free waterjet to provide long-lasting relief with a low risk of complications.

Aquablation is unique because it allows your surgeon to see the entire prostate with two kinds of real-time imaging and advanced computer software that helps your surgeon create a detailed guide that outlines specific areas of the prostate that need removed, while the surrounding tissue remains untouched. Using robotic precision helps to preserve patient continence, erection, and ejaculation. Most men return to everyday activities within a short time after the procedure.

In June, Avita became the first health system to offer Aquablation therapy to patients in the region. Both Dr. Timothy Tausch and Dr. Jeffrey Wilson are specially-trained to provide this treatment.

**WHAT OUR PATIENTS ARE SAYING**

*"My bladder emptying is improved, stream far stronger, and I'm no longer getting up at night nearly as much."\**

*"Recovery was painless."\**

*"I am very pleased with Aquablation and happy to have had the procedure."\**

*"I would highly recommend Aquablation."\**

*"It's great to be able to stop all medications for my bladder immediately after the procedure."\**

Dr. Tausch (right) after performing his first Aquablation.

God's perfect timing put us where we needed to be during an urgent medical need. My loved one was suffering from trouble urinating, and was even dependent on a catheter. A friend told me that the Avita Urology team saved her husband's life. We were blessed to have an appointment with Dr. Tausch, who recommended the Aquablation procedure. During pre- and post-operative care Dr. Tausch and his team were so informative, compassionate, and we were overwhelmed by the level of excellence in his procedural skills. The recovery was easy and my loved one is now able to urinate with ease without a catheter. I couldn't recommend Dr. Tausch and the Aquablation procedure any more highly.

- Testimonial

Dr. Wilson (right) after performing his first Aquablation.

Bucyrus Orthopedic Center Rendering

# Bucyrus Medical Clinic Features ORTHOPEDIC CENTER

Construction is underway for Avita’s new state-of-the-art medical clinic in Bucyrus, which will be located directly behind the hospital and is slated to open in late summer of 2026. The 15,000 square-foot facility will feature an orthopedic center with physician clinics, physical and occupational therapy services, occupational health services, and speech therapy.

In September, a groundbreaking ceremony was held to announce the long-awaited and highly-anticipated facility. Avita has been purchasing land around the hospital for several years to build a medical clinic large enough to house orthopedics, sports medicine, occupational health, and therapy services for patients of all ages and activity levels in a location that is easily accessible. Having all of these services under one roof with some of the most advanced rehabilitative technology, including a new Swim Ex Aquatic Therapy Pool, will enhance patient care, bringing a long-held vision to reality.

The new medical clinic will offer a range of specialized therapy programs, including sports injury rehabilitation, female and male pelvic floor therapy, vestibular and balance therapy, lymphedema treatment, stroke rehabilitation, and gait training. Central to gait training is the new Solo Step support system, which is a

Groundbreaking Ceremony for the Bucyrus Orthopedic Center

suspension-based system that allows patients to safely practice walking and mobility exercises without the risk of falls. It also enhances rehabilitation capabilities for those learning to walk with new prosthetics, giving them the opportunity to do so safely and effectively. In addition to physical and occupational therapy, adult speech therapy will continue to evaluate and treat speech, communication, voice, swallowing, and cognition disorders at this new location.

Avita WorkWell Occupational Health, which currently serves over 2,500 employers, will also relocate to the new facility and continue offering pre-employment evaluations, such

as physical examinations, drug screenings, and immunizations, as well as post-accident services, injury care, functional capacity evaluations, ergonomic assessments, training programs, and more.

The offices of John Diehl, MD and Robert Ogg, DO will move a short distance from their current clinic location on Hill Street into the orthopedic center when construction is completed. Already serving Bucyrus, Dr. Diehl, a sports medicine physician and the team physician for Bucyrus High School, joined Avita last year and Dr. Ogg, an orthopedic surgeon and sports medicine specialist, recently joined this past October.

## ORTHOPEDIC & SPORTS MEDICINE providers

He earned his medical doctorate from Lake Erie College of Osteopathic Medicine in Erie, PA and completed a residency in orthopedic surgery at Larkin Community Hospital in South Miami, FL. Dr. Ogg is fellowship-trained in wound care and orthopedic sports medicine. He also earned two master’s degrees: physical therapy and medical education, and has over 20 years of experience in healthcare.

**Dr. Ogg is accepting patients in Bucyrus and Galion. To request an appointment, call 419-562-5281.**

# The Power OF FIBER:

## Simple Changes, Big Health Benefits

By Peter Yeager, MD

Dr. Yeager with patient

As a family physician, one of my goals is to provide simple, effective ways to achieve and maintain your health so you can feel your best and live your life to the fullest. One of the most powerful yet often overlooked tools for wellness is something you can find in any grocery store: fiber.

Fiber has many health benefits: it helps lower cholesterol, supports healthy digestion, stabilizes blood sugar after meals, and can even help with weight management by helping you feel fuller for longer. Research shows that getting enough fiber may reduce the risk of heart disease, diabetes, certain cancers (like colon and breast cancer), and even dementia.

Despite these benefits, most Americans are getting far less fiber than they need. The average adult only consumes about 15 grams of fiber per day, but the recommended amount is between 25 to 38 grams for most adults. This gap means that many people are missing out on one of the simplest and most natural ways to protect their health.

If you're looking for easy and budget-friendly options, try adding beans, lentils, and oats to your diet, or topping Greek yogurt or overnight oats with frozen berries. Frozen fruit is just as nutritious

as fresh, and it's often more affordable and convenient. Adding a tablespoon of chia seeds or ground flaxseed is another great way to increase fiber. Just remember: increase fiber gradually and drink plenty of water.

Whenever possible, aim to get fiber from whole foods, which also provide important vitamins, minerals, and plant compounds that work together to support health. If you're struggling to meet your fiber goals through diet alone, fiber supplements can be a useful tool as well. The key is consistency and variety as different types of fiber offer different benefits.

As a physician, my goal is to help you achieve and maintain health, not just to prevent disease, but to support your ability to live fully and vibrantly. Fiber isn't a cure-all, but it's one of many tools we can use to build a strong foundation for lifelong wellness. Let's take those small steps together.

### FIBER-RICH FOODS

**BLACK BEANS**  
7.5g of fiber per  
1/2 cup cooked.

**LENTILS**  
7.8g of fiber per  
1/2 cup cooked.

**CHIA SEEDS**  
1.4g of fiber per  
teaspoon.

### welcome

Jody M. Baker

## INTRODUCING THE JODY M. BAKER CANCER CENTER

### "The Jode Cancer Center"

In a heartfelt tribute to two remarkable lives, Randy and Lisa Payne, along with their children, Randa Payne and Ryan (Melissa) Payne of Ontario, Ohio, have made a transformative gift to support Avita Health System's new Ontario cancer center. Their generosity honors Randy's father, Roger L. Payne, and Lisa's sister, Jody M. Baker, both of whom faced cancer with courage and grace.

Roger Payne lived a life centered on family and hard work. Throughout his 18-month battle with acute myeloma leukemia, even as he traveled longer distances for treatment, he remained steady and determined, cherishing every moment with those he loved most. Together with his wife, Mary Ann, Roger raised a close family and found immense joy in witnessing his children and grandchildren grow. Roger found his greatest joy in time spent with family.

This community has always been important to Roger; he served on the Buckeye Central School Board for 19 years, he enjoyed the Crawford County Fair, and watched countless sporting and theater events in both Richland and Crawford counties. He and Mary Ann have established many valued relationships throughout the area through his time dedicated to local endeavors, and the family hopes that the Roger Payne Endowment Fund will help those people and so many more get the treatment that they may need close to home. Traveling to and from Columbus for treatment took a toll on Roger and he also worried about the effect it had on his family. The family believes this center will alleviate patients from carrying similar burdens.

Lisa's sister, Jody M. Baker, navigated her 25-year battle with cancer with remarkable optimism. Diagnosed with breast cancer at just 37, she faced multiple recurrences, countless treatments, and many days spent traveling for care. Despite enduring surgeries, chemotherapy, and radiation, Jody's determination to live fully never wavered. She made it a priority to be present for every activity, celebration, and milestone, never allowing cancer to slow her down.

Jody was raised in New Washington by her parents Margie and "Buzz" Karl and attended Buckeye Central High School. Her devotion to her husband Doug, her son Curtis Baker, her daughter Kayla (Dakota) Durbin, and her grandchildren Charlotte, Rylee, and

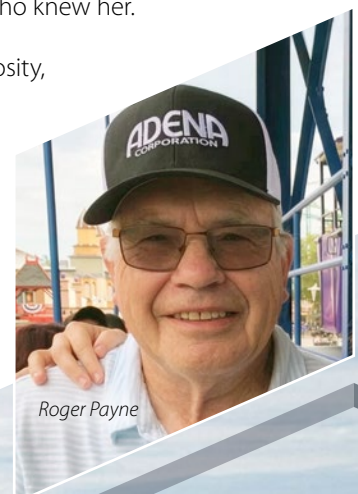

Cooper were at the heart of everything she did. In her final weeks, Jody's determination to meet her grandson, Cooper, prevailed on June 20, 2022. She passed away on July 11, 2022, only weeks after Cooper was born. Her last special evening was spent with family celebrating Kayla's birthday and the growth of their family, a memory they hold close.

The family's desire to name the cancer center "The Jode," as her family affectionately referred to her as, is to inspire every patient who walks through the doors to take on Jody's mentality. Jody never let her cancer define her existence as she soaked up the joys of life, often saying "enjoy every minute." She spent every day of her 25-year battle making the lives better of those who knew her.

Through the Payne family's generosity, the Jody M. Baker Cancer Center, affectionately known as The Jode Cancer Center, will stand as a lasting source of hope. It will honor both Roger and Jody by providing compassionate care for future patients and inspiring others to face each day with the same strength and love that defined their lives.

Randy & Lisa Payne, left, with Jerry Morasko

Roger Payne

Baker Family

# JODY M. BAKER CANCER CENTER

On November 6, Avita Health System opened the Jody M. Baker Cancer Center "The Jode." This 22,000 square-foot, \$15 million cutting-edge facility is dedicated to providing comprehensive and compassionate care to patients battling cancer. The center is designed with the latest advancements in medical technology and patient-centered care to help ensure that every patient receives the best possible treatment and support on their journey to recovery. The Jode Cancer Center houses radiation oncology, a medical oncology clinic, and infusion therapy, providing patients with seamless access to their care teams. This integrated approach ensures that patients receive coordinated care with all aspects of their treatment plan managed under one roof.

Advanced radiation therapy features a Varian® TrueBeam® state-of-the-art linear accelerator, offering the most precise and effective radiation therapy available. This technology allows us to target tumors with pinpoint accuracy, minimizing damage to surrounding healthy tissue and improving patient outcomes. Our radiation oncology team is trained in the latest techniques to ensure that every patient receives customized care tailored to their specific needs.

Dedicated PET/CT Imaging for accurate diagnoses and treatment monitoring is available on-site. This also allows our specialists to detect cancer at its earliest stages, assess the extent of disease,

and plan and monitor the effectiveness of treatment.

The infusion suite is designed with patient comfort in mind. With private treatment areas, patients can receive chemotherapy and other infusions in a calming environment. Our infusion nurses are highly trained in oncology care, ensuring that each patient's experience is as comfortable and stress-free as possible.

Comprehensive pharmacy services are also within the new facility. In addition to dispensing medications, consultation services are available with pharmacists providing one-on-one education about prescribed treatments. This service empowers patients with the knowledge they need to manage their therapy effectively and safely.

We understand that cancer care goes beyond medical treatment. The Jode Cancer Center offers on-site financial assistance services to help patients navigate the often complex financial aspects of care. Nurse navigation is available to guide patients through their treatment journey, ensuring they understand their options and receive timely care. Additionally, our social work team provides emotional and practical support, helping patients and their families cope with the challenges of a cancer diagnosis.

We are the first in Ohio and one of the few in the United States to invest in Varian RapidArc® Dynamic, an intelligent, innovative hardware that can reduce radiation dose to organs at risk by up to 50%. In addition to increased precision to protect surrounding tissue, it has the capability to reduce planning and treatment times, accelerating plan optimization and dose calculation by up to 70%.

Precision in radiation therapy plays an important role in reducing long-term complications and improving post-treatment quality of life. RapidArc Dynamic integrates with the TrueBeam radiotherapy system, a top-of-line linear accelerator developed for precise, high-speed cancer treatment that delivers focused radiation beams with image-guided accuracy. Real-time imaging is used to verify the patient's position and precisely target the tumor during treatment.

We also added the IDENTIFY™ system, surface-guided radiotherapy that integrates with the linear accelerator to increase workflow efficiency and enhance performance. It uses cameras and computer vision for patient set up and motion monitoring with submillimeter accuracy, ensuring correct treatment and minimizing errors. It features an automatic beam hold that pauses treatment if the patient moves out of the defined thresholds.

## THANK YOU DONORS

More than 700 benefactors have donated \$9.3 million towards a \$10 million fundraising goal in support of cancer center construction, survivorship programs, hospice & palliative care, a healing & memorial garden, and other cancer services. This includes a \$1.15 million grant that Ohio Senator Mark Romanchuk helped secure through One Time Strategic Community Investment Fund.

# BREAKING BARRIERS

## Avita Pharmacists Expand Access to Essential Medications

Together, the Medication Access Program and the Drug Repository Program form a comprehensive strategy to remove barriers to care. By combining access to national manufacturer programs with the redistribution of donated medications, Avita Health System has created a model that improves affordability, reduces waste, and ensures patients have access to the therapies they need.

### Medication Access Program

Medication affordability continues to be a challenge for many individuals across North Central Ohio. When prescriptions are unaffordable, patients may delay refills, split doses, or stop taking their medications altogether. These gaps can lead to serious health consequences and higher rates of emergency care or hospitalization.

Avita Health System's Medication Management Center (MMC) developed the Medication Access Program to address these concerns directly. This nationally recognized, pharmacist-led service began in early 2022 and quickly became an important resource for patients struggling with the high cost of prescriptions. In its first year, the program secured more than \$1.4 million in free or reduced-cost medications for patients. By the end of 2024, that number had grown to over \$20 million, with savings continuing to climb.

The program helps patients by connecting them with hundreds of manufacturer-sponsored assistance programs, copay support cards, voucher options, and health grants. Each opportunity is matched to

These services provide critical support for individuals managing chronic illnesses, promote better health outcomes, and offer peace of mind for families balancing the costs of daily life. With both programs working side by side, Avita continues to strengthen its commitment to delivering patient-centered care and advancing the health of the community.

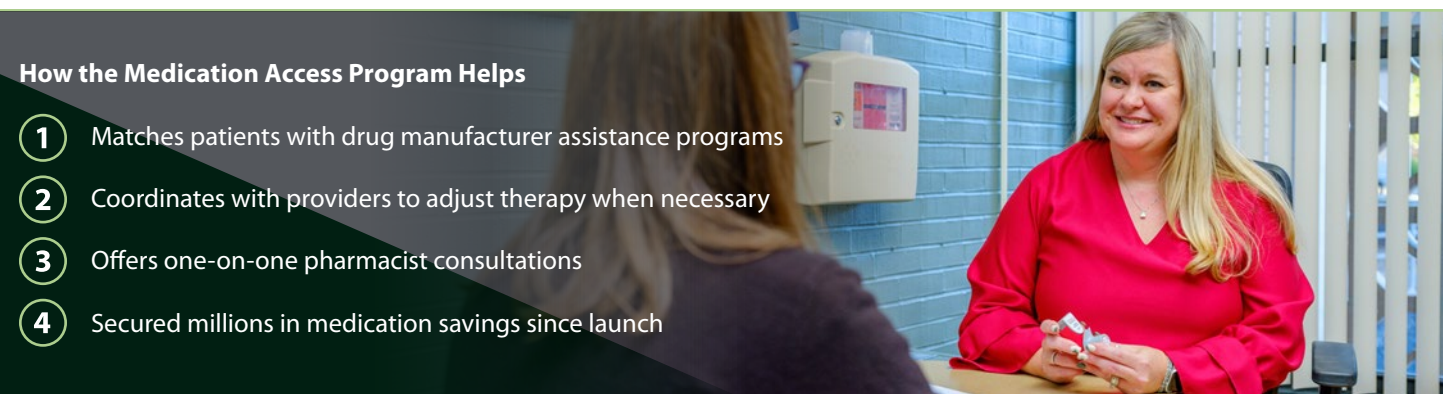

the individual's specific therapy, insurance coverage, and financial situation. The goal is simple: ensure that every patient has access to the medications required to manage chronic illnesses and live healthier lives.

Participation begins with a referral from a medical provider. After a brief eligibility screening, patients meet with a pharmacist for a one-on-one consultation in a clinic setting. During this visit, medication needs are reviewed, insurance plans are assessed, and possible assistance routes are identified. When a patient does not qualify for one program, alternatives are explored so that care can continue without interruption.

This tailored approach has already benefited hundreds of patients who rely on expensive treatments for diabetes, heart failure, kidney disease, high cholesterol, and pulmonary disease. The Medication Access Program not only saves money but also reduces stress, helping patients feel more secure in managing their long-term health conditions.

#### How the Medication Access Program Helps

- 1 Matches patients with drug manufacturer assistance programs
- 2 Coordinates with providers to adjust therapy when necessary
- 3 Offers one-on-one pharmacist consultations
- 4 Secured millions in medication savings since launch

The MMC has  
**SAVED**  
our community more than  
**\$20**  
**MILLION**

### Drug Repository Program

Building on the success of the Medication Access Program, our pharmacists in the Medication Management team expanded services by launching a Drug Repository Program at our hospitals in Bucyrus, Galion, and Ontario. This program allows individuals and organizations to donate unexpired prescription medications that are no longer needed. Every donation is carefully inspected and verified by licensed pharmacists to ensure quality and compliance with Ohio State Board of Pharmacy safety requirements. Approved medications are then redistributed to patients who meet financial criteria, at no cost.

The Drug Repository is designed to make the most of resources that might otherwise go to waste. When a patient changes therapy, or when a family is left with unused medications after a loved one passes away, the program provides a safe and meaningful way for those medications to help others in need. By redirecting these medications, Avita is reducing waste while extending the reach of its medication assistance services.

This program works in tandem with the Medication Access Program. Patients who are eligible for donated medications are also enrolled in the larger assistance program to ensure they have the opportunity to access multiple sources of help. The repository often serves as a bridge when immediate access is needed.

Donated medications may be provided while a patient awaits manufacturer program approval, during shipment delays, or when re-enrollment deadlines are missed. Hospitalized patients who face discharge without affordable prescriptions can also benefit, ensuring they return home with the right therapy in hand and reducing the risk of readmission.

#### Where to Donate

Donations of eligible, unexpired medications are accepted at:

1. Galion Hospital Medication Management Center
2. Avita Ontario Pharmacy
3. Avita Crestline Pharmacy

#### Who Qualifies for Repository Medications?

- Must be an Ohio resident
- Meet financial criteria (uninsured, underinsured, or income-based)
- Referral from a medical provider required
- Enrolled in the Medication Access Program for ongoing support

## REASONS TO SEE AN ENT

An ENT (Ear, Nose, and Throat) doctor, also known as an otolaryngologist, specializes in diagnosing and treating conditions related to the ears, nose, throat, and related structures of the head and neck. There are several reasons you may seek the expertise of an ENT.

### 1 NASAL AND SINUS PROBLEMS

Chronic sinusitis, frequent nasal congestion, and difficulties breathing through the nose may indicate underlying problems such as a deviated septum, nasal polyps, allergies, or chronic rhinitis. An ENT can perform endoscopic examinations to assess the internal structures and suggest medical or surgical interventions.

### 2 THROAT AND VOICE-RELATED ISSUES

Persistent sore throats, hoarseness, or difficulty swallowing may be due to acid reflux, infection, or an even more serious issue like throat cancer. An ENT can examine your throat and perform tests such as a throat culture or laryngoscopy. Long-lasting hoarseness, especially if it's accompanied by pain or discomfort, can signal issues like vocal cord nodules, laryngitis, or tumors.

### 3 OBSTRUCTIVE SLEEP APNEA

Snoring, especially if it's loud and disruptive, could be a sign of obstructive sleep apnea (OSA). After an evaluation by a sleep

medicine doctor, you may be referred to an ENT to further examine your airway, identify obstructions, and provide treatment options. Our ENT's specialize in advanced treatments for OSA, including Inspire® therapy, which is an implant that keeps your airway open while you sleep.

### 4 CHRONIC EAR INFECTIONS AND HEARING LOSS

If you suffer from recurring ear infections, an ENT can determine if there's an underlying cause, like fluid buildup, a ruptured eardrum, or a blockage in the Eustachian tube. They can also offer treatments to help prevent future infections. If you're experiencing hearing loss, either gradual or sudden, an ENT can evaluate your hearing through tests and determine the cause, whether it's age-related, due to noise exposure, or linked to a medical condition like tinnitus (ringing in the ears).

### 5 THYROID DISEASE

ENTs often collaborate with endocrinologists to diagnose, monitor, and treat thyroid disorders, including thyroid overgrowth, cysts, thyroiditis, goiters, and thyroid cancer. The vast majority of thyroid nodules are benign (non-cancerous), but patients may benefit from surgical removal if the nodule is large enough to cause difficulty breathing or swallowing.

## welcome KATHRYN COLLINS, DO

Dr. Collins earned her medical degree at NYIT College of Osteopathic Medicine in Old Westbury, NY. She completed an internship in general surgery at Nassau University Medical Center in East Meadow, NY, followed by a residency in otolaryngology at OhioHealth in Columbus, OH.

## welcome STEPHANIE DORIS, DO

Dr. Doris earned her medical degree at Touro University in Henderson, NV, followed by a residency in general surgery at OhioHealth Doctors Hospital and a trauma research fellowship at Grant Medical Center in Columbus, OH.

*"I have a special interest in breast health, including diagnosing and treating breast masses, cancerous and not, and performing excisional biopsies, lumpectomies, and mastectomies with a big emphasis on shared decision making with my patients." – Dr. Doris*

## 24/7 GENERAL SURGERY CARE

Avita provides 24/7 general surgery for life-threatening situations that need immediate surgical intervention. This has been true since the inception of our health system, but we now have more general surgeons than ever to meet the needs of our communities. Our general surgeons have decades of combined experience, including Dr. Daryl Sander, who has served the community of Galion for almost 35 years!

General surgeons are trained on multiple organs and systems of the body, such as the digestive system, skin, soft tissues, and endocrine system. They perform endoscopies, colonoscopies, and common general surgeries, including appendectomies, gallbladder removals, and hernia repairs. Our team also performs advanced general surgeries, such as cancer care of the breast, skin, and gastrointestinal tract. From preventative

scopes and scheduled procedures to emergency care, our experts provide a full-spectrum of general surgery services, which includes extensive pre-operative and post-operative care to ensure that you're fully prepared for surgery and recovery.

In addition to traditional surgical methods, we also offer laparoscopic and robotic-assisted options. Since 2015, we have been investing in top-of-line DaVinci surgical robots to provide the highest level of surgery care, often resulting in smaller incisions, less post-op pain, and quicker recovery. Last year, we upgraded our robots to the newest, most advanced models on the market!
