Walk-In Clinic *and* Medical Offices Now in Shelby

Avita started off 2024 by expanding into Shelby with a new Walk-In Clinic and medical offices at 24 E. Whitney Ave.

"We're excited to offer urgent care, primary care, and specialty services in Shelby," explained Jerry Morasko, President/CEO of Avita Health System. "Our newest clinic provides a convenient third option for urgent care needs in Richland County, joining our Bellville and Ontario Walk-In Clinics. In addition, we have family medicine, cardiology, urology, pediatrics, OB-GYN, and more to come. Our focus is to continue providing additional access to healthcare services to our newest community."

Avita purchased the 47,730 sq. ft. property in October 2023 and renovated the facility for over three months before officially opening in February 2024. It boasts three medical suites, 18 patient rooms, and brings approximately 25 new jobs to the area.

Scan the QR code to learn more about our walk-in clinics.

Don't Let BPH Hold You Back

The #1 Reason Men Visit a Urologist

BPH stands for Benign Prostatic Hyperplasia, commonly called enlarged prostate. It occurs when the prostate becomes so enlarged that it presses against the urethra. Over time, the bladder wall thickens and eventually weakens.

Common Symptoms of BPH

- Frequent urination – 8 or more times per day
- Urinating more often during the night – 2 or more times
- Weak or delayed urine stream
- Urinary urgency
- Dribbling at the end of urination
- Not being able to fully empty bladder
- Urinary incontinence

BPH is more common than you think. The prostate grows during a man's lifetime. It doubles in size during puberty and enters into another growth phase around the age of 25. It continues to grow throughout a man's life and if it becomes too enlarged, then issues arise. The causes of BPH are not clear, but hormone changes, such as a decrease in testosterone, may play a role. Luckily, BPH does not raise your risk for prostate cancer, but it can significantly decrease your quality of life and lead to loss of productivity and depression. If left untreated, complications may include chronic urinary retention, urinary tract infections, bladder stones, and damage to the bladder and kidneys.

Who is at risk?

- Men over the age of 40
- Men who are overweight / obese
- Men who lack physical activity
- Men with a family history of BPH
- Men with heart or circulatory disease or type 2 diabetes

BPH affects

 **50%**
of men
ages 51-60

 **up to 90%**
of men
ages 80+

TREATMENT OF BPH

Rezūm™ Water Vapor Therapy

Rezūm™ Water Vapor Therapy is a minimally invasive treatment for BPH that uses natural water vapor to reduce the size of the prostate with many years of clinical data to support its effectiveness. Rezūm™ provides lasting symptom relief without invasive surgery, the need for any permanent implants, or the potential side effects of prescription drugs.

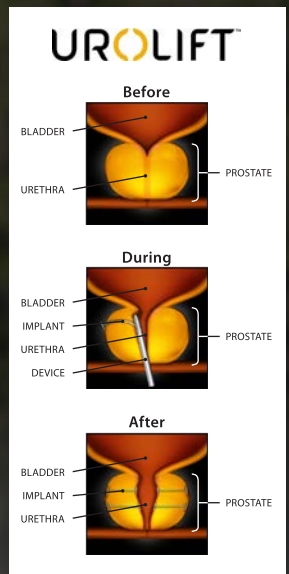

During treatment, natural water is released throughout the targeted prostate tissue. When the steam contacts the tissue and turns back into water, energy is released, removing the excess prostate cells that squeeze the urethra as the body's natural healing response shrinks the prostate. With the extra tissue removed, the urethra opens, relieving BPH symptoms. Most men experience symptom relief in as soon as two weeks with three to six months to experience the full benefit.

Get to know Jeffrey Wilson, MD.
Scan the QR code
or visit avitahealth.org/providers/jeffrey-wilson to watch his video.

The UROLIFT® System

The Urolift® System is a minimally-invasive option to treat BPH that preserves sexual function and has fewer side effects than other procedures. A device is used to lift and move the enlarged prostate tissue out of the way so it no longer blocks the urethra. Customized implants are placed to hold the tissue back, leaving an immediate, unobstructed pathway for urine to flow more easily. With the tissue pulled back, the urethra opens, relieving BPH symptoms.

Urolift® does not require heating, cutting, or destruction of the prostate tissue, which means minimal side effects such as pain. The procedure is intended to be a long-lasting solution for BPH that uses small, permanently placed implants. After a mild sedation, patients go home the same day and typically no catheter is required after the procedure. Symptom improvement is demonstrated as early as two weeks and may continue to improve up to three months. Patients experience less frequent need to urinate, a stronger stream with better bladder emptying, and most can stop BPH medications saving on cost and side effects.

The ONE SPORT INJURY

Treating and Preventing Overuse Injuries in Kids

With the popularity of organized youth sports on the rise, overuse injuries, also known as one sport injuries, in student athletes have significantly increased in the past several years. Although sports participation can promote healthy, lifelong habits in kids, too much activity can lead to injury, especially when specializing in a single sport. Young athletes are at a greater risk of injury than adults because they are still growing. The effects of overdoing a sport not only includes injury, but could also impair growth and lead to long-term health problems.

Cause

Overuse injuries gradually occur over time. When a child participates in only one sport year-round, they continually use the same muscles while repeatedly putting stress on the same areas of the body. Without proper rest between play, this can lead to muscle imbalances that, when combined with overtraining, greatly increase the risk of overuse injuries.

Symptoms

The most common signs of overuse injuries include:

- Pain that cannot be tied to an acute injury, such as a fall.
- The pain often increases with activity and decreases with rest
- Swelling
- Changes in form or technique
- Decreased interest in practice

Prevention

Overuse injuries can easily be prevented. The key is to avoid overdoing any one sport. Here are few ways to prevent overuse injuries:

- Give growing bodies proper time to rest between play
- Limit the number of teams a child plays on in a single season
- Do not play one sport year-round
- Take regular breaks and play other sports

Treatment

If recognized early, finding pain relief from overuse injuries is as simple as resting from the sport. However, if left untreated, overuse injuries can become worse and potentially cause irreversible damage.

Almost **HALF** of all sports injuries in kids ages 12-18 are overuse injuries.*

Most Common OVERUSE INJURIES in Kids

Overuse injuries can affect muscles, tendons, ligaments, bones, and growth plates. The most common overuse injuries include:

- **Sever's Disease** – an inflammatory disease of the growth plate in the heel bone. Running, jumping, and being active lead to repetitive stress on the growth plate resulting in swelling and causing heel pain.
- **Jumper's Knee** – pain that occurs in the lower portion of the kneecap, where the patellar tendon attaches to the kneecap. Although more common in sports that involve jumping, such as volleyball, this injury can occur in many different sports.
- **Little Leaguer's Elbow** – pain at the boney bump on the inside of the elbow. This bump, at the end of the humerus bone, contains a growth plate which can become inflamed with too much overhand throwing.
- **Stress Fractures** – when muscles become tired and transfer the stress of activity to the bones. Eventually, the bone fails and a small crack develops. Most occur in the lower leg and foot.
- **Strains and Sprains** – soft tissue such as muscles, ligaments, and tendons can be injured from overuse.

The mission is simple:
CANCER CARE
close to home.

Avita Health System is in the planning phase of a \$15 million+ cancer center, a cutting-edge facility dedicated to providing comprehensive and compassionate care to patients battling cancer. The center is being designed with the latest advancements in medical technology and patient-centered care to help ensure that every patient receives the best possible treatment and support on their journey to recovery.

The center will feature a state-of-the-art TrueBeam® linear accelerator, offering the most precise and effective radiation therapy available. This technology targets tumors with pinpoint accuracy, minimizing damage to surrounding healthy tissue and improving patient outcomes. The center will also house a new PET/CT scanner, a powerful tool that combines the metabolic imaging of PET (positron emission tomography) with the anatomical detail of CT (computed tomography). Radiation therapists will be able to use this tool to more accurately plan

THE CENTER WILL FEATURE
 A STATE-OF-THE-ART
TRUEBEAM®
LINEAR ACCELERATOR
 AND PET/CT SCANNER.

radiation treatments, which will reduce the toxicity of therapy and improve outcomes. This will allow specialists to detect cancer at its earliest stages, assess the extent of disease, and plan and monitor the effectiveness of treatment, all in one visit.

Along with this new technology, the 20,000+ square foot cancer center will feature a medical oncology clinic, a radiation oncology clinic, 16 infusion bays, a lab, and comprehensive pharmacy services, providing patients with seamless access to their care teams. This integrated approach ensures that patients receive coordinated care with all aspects of

their treatment plan managed under one roof.

The new cancer center is slated to open in late fall of 2025. Approximately 60 new jobs will be added as the center opens and expands on-site support services to patients.

The Avita Health Foundation has launched a fundraising campaign, making a distinct commitment to help strengthen healthcare in the communities Avita serves. "Soon, patients facing a cancer diagnosis will be able to receive great care, close to home, where family and friends can provide much needed support. Board members, physicians, hospital leadership, and the community have been extremely generous as the Foundation has secured more than \$4 million in grants, gifts, and pledges towards their \$6 million goal to help fund the cancer center. This marks a significant milestone in this transformational project that will change the face of cancer care in our community," said Chuck Cangelosi, Chief Development Officer of the Avita Health Foundation.

On average,
273 PATIENTS
 are diagnosed with cancer in **Crawford County** annually.

On average,
793 PATIENTS
 are diagnosed with cancer in **Richland County** annually.

THE TOP 4 TYPES OF CANCER

for both Crawford and Richland counties are lung, breast, prostate, and colorectal cancers.

Supporting a Cancer Journey

Brick by Brick

The Avita Health Foundation invites you to support our cancer program by creating a lasting legacy in memory or in honor of a loved one, colleague, or someone who made a difference in your life.

The **Healing & Memorial Gardens** at Avita's Cancer Center and Avita Home Health & Hospice support patients and families throughout the year by offering a peaceful and tranquil place for meditation, to gather thoughts, and process information.

When you purchase an engraved brick, paver, or garden bench, countless patients, visitors, and employees will have the opportunity to appreciate and find inspiration from all of the loving and meaningful messages as they visit the Healing & Memorial Gardens.

All brick, paver, and bench purchases in October, November, and on Giving Tuesday in December will be matched dollar-for-dollar up to \$500,000 by the Avita Health Foundation.

Scan the QR code for more information and to purchase a brick, paver, or bench.

YOUR ONCOLOGY TEAM

welcome
JEFFREY VANDEUSEN, MD

Dr. VanDeusen earned his Medical Doctorate from The Ohio State University, College of Medicine in Columbus, OH, where he also obtained a PhD in Molecular Virology, Immunology, and Medical Genetics. He completed a residency and fellowship in hematology/oncology at Duke University in Durham, NC.

"It is heartbreaking when patients have to travel long distances to get the care they need. The new cancer center will not only provide a space for Avita to deliver radiation and chemotherapy for our patients, but the support services that are so essential to help them through the difficult journey of cancer." - Dr. VanDeusen

Investing in Our Community

with Advanced Technology

AVITA IS THE **FIRST** CRITICAL ACCESS HOSPITAL IN THE COUNTRY TO PURCHASE THE **NEW DA VINCI 5 SURGICAL ROBOT.**

Avita Galion Hospital Installs New MRI with AI Technology

Our new ECHELON Synergy 1.5 Tesla MRI system employs Fujifilm's proprietary DLR technology powered by AI to enhance the sharpness of images and acquire scans faster, contributing to higher image quality and reduced scan times. Reconstructing images with AI delivers scans four times faster than standard scans, which expands MRI access to more patients and reduces wait times for appointments.

Other features designed to enhance patient comfort and satisfaction include the 70cm wide bore and 62cm wide table to accommodate patients up to 550 pounds. The system's opening accommodates a diverse array of patients, including individuals who have traditionally been hard to image due to their body weight or claustrophobia.

With this new equipment, Galion Hospital can perform MRI scans of the brain, spine, extremities, abdomen, and now breasts, as well as patients with MRI compatible pacemakers and leads.

Avita Adds Three New Surgical Robots

Bucyrus Hospital now has its first surgical robot – the da Vinci Xi! Galion and Ontario Hospitals also added new surgical robots, including the da Vinci 5 at Galion Hospital, making us the first critical access hospital in the country to invest in this brand-new surgical system. With these additions, we now have four robots to better serve our patients.

Robotic-assisted surgery now spans across all of our hospitals and is used for general surgery, bariatrics, urology, and obstetrics/gynecology. Robotic-assisted surgery gives our surgeons greater range of motion and a better view of the surgical area. Patients often benefit from smaller incisions, reduced pain, faster recovery, and minimized scarring.

2024 ▶ **FIRST SURGICAL ROBOT IN BUCYRUS!**
 ▶ **FIRST DA VINCI 5 IN THE COUNTRY AT A CRITICAL ACCESS HOSPITAL!**
 Avita continues to enhance surgical services with the purchase of three top-of-the-line surgical robots, including two da Vinci Xi (Bucyrus and Ontario Hospitals) and one da Vinci 5 (Galion Hospital).

2014 Avita became the first health system in the region to purchase a da Vinci Si surgical robot. This robot is now retired.

2021 Avita added the da Vinci Xi at Galion Hospital to perform robotic bariatric "weight loss" surgery.

BACK *to* SCHOOL

Tips to Keep Your Child Healthy by Madelyn Strickling, DO

Back-to-school season is busy, and dealing with a child who is under the weather can add to the stress. Here are a few tips to keep your children healthy this fall.

- 1. Handwashing.** Teach your kids the importance of hand washing to cut down on germs. Singing a fun song is a great way to make sure they are washing long enough with soap and water. Hand sanitizer is also very effective.
- 2. Cover the cough.** Teach kids to cough and sneeze into their elbow. Remember that masks can also be helpful, especially if the whole class seems to be sick or your child is recovering from an illness.
- 3. Sleep.** Good sleep is important! Since every kid has a phone and/or tablet, I recommend creating a central charging station outside of the bedroom. About 30 minutes before

bedtime, place the devices on the charger. Then do a calming nighttime routine and settle in for a good nights sleep.

- 4. Immunizations.** Children are still developing their immune systems and are frequently sick with colds. Thankfully, we have well-studied vaccines that can prevent some of the most common and dangerous illnesses. Check with your child's pediatrician to make sure they are up to date with shots before school starts.

As always, if you have questions about your child's health, schedule an appointment with their doctor. To request an appointment scan the QR code.

Dr. Dorsey with patient

Dr. Cynthia Dorsey has joined Avita!

Diabetes in Our Community

Did You Know?

The need for expert endocrinology care is apparent as the diabetes epidemic continues to affect our communities. Diabetes was identified in both Crawford and Richland County as “health priorities” via recent Community Health Needs Assessments. Dr. Dorsey signifies our ongoing efforts to expand access to diabetes care.

Avita Health System proudly welcomes endocrinologist Dr. Cynthia Dorsey. She brings a wealth of experience, including almost 30 years serving patients in Mansfield! Dr. Dorsey’s deep-seated commitment to patient care further enriches our capabilities to treat endocrine disorders and promote well-being within the community.

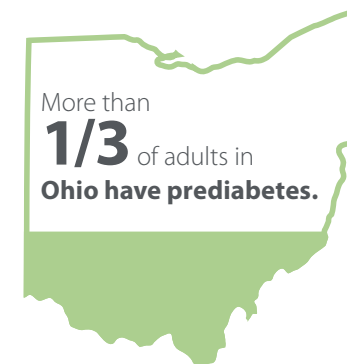

Endocrinology, the branch of medicine concerned with hormones and the endocrine system, plays a pivotal role in managing various health conditions. Dr. Dorsey’s clinical interests extend beyond diabetes to a wide spectrum of endocrine disorders, including thyroid diseases, adrenal disorders, pituitary dysfunction, osteoporosis, and more.

At Avita, we are committed to fostering collaborative relationships with patients and empowering them to actively participate in their healthcare journey. Dr. Cynthia Dorsey epitomizes this patient-centered philosophy by prioritizing open communication, empathy, and personalized care in her clinical practice. She takes the time to listen to her patients’ concerns, educate them about their conditions, and involve them in decision-making processes, thereby fostering trust and mutual respect.

Beyond her role at Avita, Dr. Dorsey regularly volunteers her medical skills in places like Honduras, where healthcare is

limited. Her commitment to global health equity shines a light on Avita’s dedication to making a difference beyond their doors.

**1 IN 10 AMERICANS

AVITA PHARMACY

Coming to Crestline!

Avita is opening a full-service outpatient pharmacy at 385 N. Seltzer Street in Crestline. Curbside prescription pick-up will be available, as well as automatic refills, immunizations, one-on-one consultations, and more. Additionally, Avita's RX Local app will allow patients to request refills, set reminders, and send secure messages to our pharmacy team. Patients can start taking advantage of these benefits now by using the Avita Ontario Pharmacy and then transitioning their prescriptions to our Crestline pharmacy when it opens in early 2025. Call 567-307-7570 to transfer your prescriptions to our Ontario location today.

"Many communities recently lost pharmacy services, and Crestline residents were left with no option in their home town," stated Jerry Morasko, President/CEO of Avita Health System. "I am happy that Avita will be able to provide convenient access of those services to this area in addition to bringing new jobs to Crestline."

Jerome Morasko, President/CEO

Avita Health System complies with applicable Federal civil rights laws and does not discriminate on the basis of race, color, national origin, age, disability, or sex.

Avita Health System cumple con las leyes federales de derechos civiles aplicables y no excluye, discrimina ni trata a las personas de manera diferente según la raza, el color, el origen nacional, el sexo (incluye la identidad de género y la orientación sexual), la edad o la discapacidad en sus programas y actividades de salud.

Avita 医疗保健系统遵守适用的联邦民权法，在其医疗保健计划中不会因种族、肤色、族裔、性别（包括性别认同和性取向）、年龄或残疾而排斥、歧视或区别对待他人和活动。
