**Now with a
Drive-Thru**

Just over a year after restoring pharmacy services to Crestline, Avita has expanded its commitment to local healthcare with the opening of the new Avita Crestline Pharmacy location at 245 N. Seltzer Street. This isn't just a change of address; it's a complete upgrade. Designed with your health and convenience in mind, we created a space that makes every part of your pharmacy experience better.

We know life is busy, and getting your prescriptions shouldn't be a hassle. That's why one of the most exciting additions is our new drive-thru service. It's a game-changer for parents with sleeping kids in the car, patients feeling under the weather, or anyone who needs a quick and easy pick-up.

Step inside, and you'll immediately notice the difference. The new space features an expansive selection of over-the-counter products. From vitamins and supplements to first-aid supplies and wellness items, you'll find everything you need to support your family's health right here, close to home.

Your health conversations are important, and they deserve privacy. The new location features a dedicated consultation room, offering a quiet, confidential space to speak with your pharmacist, ask questions, or receive immunizations comfortably.

The upgraded location reflects Avita's ongoing efforts to meet the evolving needs of the Crestline and surrounding communities while improving the overall patient experience. Since opening in 2025, Avita Crestline Pharmacy has become a trusted resource for residents seeking personalized, local pharmacy care.

The new location allows the pharmacy to continue providing the same personalized service patients have come to expect while offering greater convenience and accessibility. Whether patients are stopping in for a prescription refill, over-the-counter medications, immunizations, or a consultation with a pharmacist, they can count on receiving high-quality care from a team they know and trust.

245 N Seltzer St, Crestline, OH 44827 • 419-462-3806

HOURS: Monday-Friday: 8:00am to 8:00pm Saturday-Sunday: 8:30am to 5:00pm (closed daily 12:30 to 1:00pm for lunch)

AVITA'S WEIGHT LOSS PROGRAM

Three patients.
Three paths.
One healthier future.

Back to Making Memories

- Gastric Bypass
One of Erica's biggest motivations to lose weight was her daughter. Family trips to Cedar Point had become challenging. Erica had difficulty keeping up and couldn't fully enjoy their time together. Combined with health concerns, including prediabetes and high blood pressure, Erica knew it was time for a change. In August of 2024, under the care of Avita Bariatric Surgeon Justin Eagleston, MD, she underwent gastric bypass surgery and transformed her health. Today, she and her daughter spend their weekends at Cedar Point riding rides and making memories together. Erica credits Dr. Eagleston and the bariatric team for helping her lose 106 pounds, and achieve her goals. She describes their support as, "nothing short of amazing," saying the experience, "gave me my life back."

A Life Transformed

- Sleeve Gastrectomy
Chris suffered from high blood pressure and sleep apnea for years. His turning point came after a sinus infection led to an emergency department visit. During that visit, he learned his conditions were worse than he thought. Realizing he could no longer ignore his health, Chris turned to Avita Bariatric Surgeon Thomas Smith, DO for help. In the summer of 2024, Chris underwent sleeve gastrectomy. Combined with education, accountability, and ongoing support, Chris lost more than 220 pounds, came off all of his medications, and dramatically improved his sleep apnea. Today, he has more energy, mobility, and confidence. Looking back, he calls it the "best choice I ever made."

Sustainable Change

- Medication Weight Loss
After years of trying to lose weight on her own, Amanda realized it was okay to ask for help. Motivated by a desire to keep up with her three children, she chose a non-surgical path with Raygan Ciballi, PA-C through Avita's medical weight loss program. Amanda began treatment in April 2025 and has lost 65 pounds with the help of Zepbound®, nutrition guidance, lifestyle changes, and ongoing support. She now has more energy, greater confidence, and finds everyday activities much easier. Looking back, Amanda says, "It's been a great experience. The clinic is always available, nonjudgmental, and caring."

Weight loss journeys rarely look the same. For Erica, Chris, and Amanda, the paths they chose were different, but their outcomes were remarkably similar: better health, more energy, and a renewed confidence in everyday life. Meaningful change is possible with the right support and a path that works for you.

KEEPING CANCER CARE close to home at Avita

Save Time, Money, and Peace of Mind

When faced with a cancer diagnosis, patients no longer have to choose between world-class treatment or staying close to home. At The Jode Cancer Center, named after Jody M. Baker, patients can receive high-quality cancer care and enjoy significant financial savings and lifestyle benefits without compromising treatment.

Patient outcomes depend not only on medical expertise, but on the entire care experience. Along with state-of-the-art technology and expert care, factors like reduced stress, strong support systems, and financial stability all contribute to successful treatment results.

The True Cost of Distant Treatment

Cancer treatment at distant facilities can create a cascade of hidden expenses that extend far beyond medical bills, which can quickly add up during an already stressful time. Patients in our communities benefit from:

- **Reduced transportation costs**, including gas, parking fees, and vehicle maintenance.
- **Zero lodging expenses** for hotels, extended-stay facilities, or temporary housing.
- **Maintained household income** for caregivers and those who are able to continue working.

Time: The Irreplaceable Resource

Beyond financial benefits, Avita preserves something even more valuable: time. Receiving treatment at The Jode eliminates extensive travel, giving patients more time to spend with family, conserving energy for healing, and, when possible, maintaining their work schedules.

The Comfort Factor

Undergoing treatment in familiar surroundings offers emotional and mental benefits that directly support healing. Patients remain connected to their support networks while maintaining their normal routines. This stability can ease anxiety, reduce stress, and improve quality of life throughout treatment.

Comprehensive Treatment

The Jode provides comprehensive cancer services with a patient-centered approach to ensure that every patient receives the best possible treatment and support. Providing patients with seamless access to their care teams under one roof, the facility houses:

- Radiation oncology services featuring Ohio's first Varian® TrueBeam® linear accelerator with RapidArc® Dynamic technology, offering the most precise and effective radiation therapy.
- Medical oncology services including care from expert physicians and highly trained nurses.
- An infusion therapy suite with private treatment areas where patients can receive chemotherapy in a calming environment.
- Dedicated PET/CT imaging for accurate diagnoses and treatment monitoring.
- Comprehensive pharmacy services, including Medication Management.
- Onsite support services, including lab, financial assistance, nurse navigation, and social work support.

Looking Forward

At The Jode, patients can receive world-class treatment while preserving their financial resources and quality of life. Avita combines medical excellence with the irreplaceable benefits of staying close to home, family, and the life patients are fighting to preserve allowing them to focus on their journey to recovery.

Exclusive Treatment Options

Paxman Scalp Cooling® System

This state-of-the-art technology cools the scalp causing blood vessels to narrow. This reduces the amount of drug exposure to the hair follicle minimizing hair loss during chemotherapy treatment.

Bispecific Antibody Immunotherapy

Bispecific antibodies bind an immune cell (T cell) to a cancer cell and forces the immune cell to destroy the cancer cell. Avita is the only health system between Cleveland and Columbus to offer this breakthrough therapy.

Pluvicto®: Advanced Therapy for Prostate Cancer

Pluvicto targets metastatic castration-resistant prostate cancer delivering localized radiation directly to the tumor site while minimizing damage to healthy tissue. We are the only health system in the area to offer this treatment making Avita a regional destination for advanced prostate cancer.

AVITA BUCYRUS ORTHOPEDIC, SPORTS MEDICINE & THERAPY CENTER

Avita Health System continues to invest in the communities it serves by expanding access to care, providers, and needed services where people live. Recent projects in Bucyrus and Ontario reflect that commitment, with new spaces designed to improve access, enhance coordination, and support a better overall patient experience.

Bucyrus Orthopedic Center

The new Bucyrus Orthopedic Center will open late fall of 2026, as a 15,000-square-foot, state-of-the-art medical facility located next to Avita Bucyrus Hospital. The center will bring multiple services together creating a more connected and convenient experience for patients to easily access care, treatment, and rehabilitation all under one roof.

Services Available at the Bucyrus Orthopedic Center

- Orthopedics and Sports Medicine, including the offices of Dr. Diehl and Dr. Ogg
- Physical and Occupational Therapy
- Adult Speech Therapy, continuing their support for patients with speech, communication, voice, swallowing, and cognitive needs.

Avita WorkWell

Occupational Health Services, which serves more than 2,500 employers, will also be located within the facility. Services include:

- Pre-employment evaluations
- Drug screenings and immunizations
- Post-accident care and injury treatment
- Functional capacity evaluations and ergonomic assessments

Advanced Technology for Physical Therapy

The new facility includes advanced rehabilitation technology designed to improve patient safety and outcomes.

- An aquatic therapy pool supports low-impact movement and recovery, reducing stress on joints and muscles to build strength.
- The Solo-Step™ system allows patients to safely practice walking and mobility while speeding up recovery.

By bringing care together in one location, the Bucyrus Orthopedic Center makes it easier for patients to move through treatment and recovery with fewer barriers. The result is a more convenient, coordinated experience, helping patients get back to their daily activities.

AVITA ONTARIO SOUTH CAMPUS EXPANSION ADDS NEW CLINIC SPACE

Avita continues to expand services through further development of the Ontario South Campus. Designed to meet growing demand and support long-term access to care, the space will include four large clinics, creating capacity for up to 16 additional providers. This allows Avita to offer more services across specialties and better serve patients throughout the region.

The expansion will also include the Fagan Family Memorial & Healing Garden located near The Jode Cancer Center. This space is designed to enhance the patient experience by providing a calming, supportive environment for patients and families to enjoy during treatment.

Ontario South Campus Lower Level

Avita's Orthopedic and Sports Medicine team is accepting new patients! No referrals needed.

Dr. Beddell with patient

SUN DAMAGE PREVENTION & TREATMENT

Sun damage doesn't just show up as a sunburn, it happens every day. Over time, that exposure builds up and can lead to visible skin changes, including:

- Wrinkles and changes in skin texture
- Age spots and uneven tone
- Redness or discoloration

It can also contribute to more serious conditions, such as:

- Precancerous lesions
- Skin cancer

Small amounts of exposure repeated over time can have a lasting impact on how your skin looks and feels. That's why it's important to think about skin health not just in the summer, but year round. "A lot of what I see starts with years of everyday sun exposure," says Dr. Gregory Beddell, Avita plastic and reconstructive surgeon. "The good news is we can often treat it, and in many cases prevent it from getting worse."

Sun Damage

Prevention Starts With Simple Habits

Protecting your skin doesn't have to be complicated. Small, consistent steps can make a big difference in skin health.

- Use a broad spectrum sunscreen (SPF 30 or higher) every day
- Reapply if you're spending time outdoors
- Wear hats, sunglasses, and protective clothing
- Be mindful of peak sun hours between 10am and 4pm

Even on cloudy days, UV exposure is still happening. Building these habits into your routine now can help reduce damage later.

What To Watch For

Precancerous lesions, often called actinic keratoses, usually appear on areas that get the most sun, like the face, scalp, arms, and hands. They may look like rough or scaly patches, red or pink spots, and areas that feel dry or irritated. If left untreated, some of these spots can develop into skin cancer.

It's also important to pay attention to any changes in your skin. If something looks different, doesn't heal, or continues to change, it's worth having it checked. Early evaluation can make a significant difference in treatment.

1 in 5

Americans will develop skin cancer by the age of 70*

2x

Having 5 or more sunburns doubles your risk for melanoma*

When detected early, the 5-year survival rate for melanoma is

99%*

Treatment Options

If something concerning is found, there are several treatment options available.

Precancerous lesions can often be treated in the office using treatments designed to remove damaged cells while preserving healthy skin. These include:

- Freezing treatments
- Topical medications
- Light-based therapies

For skin cancers, treatment depends on the type and location. The goal is always to remove the cancer completely while preserving as much healthy tissue as possible and maintaining function and appearance.

Sun exposure doesn't just affect your health; it also changes how your skin looks over time. Many patients ask about sun damage or discoloration, uneven skin tone, fine lines, and early signs of aging.

These concerns are common and often connected to years of cumulative exposure. The good news is there are treatment options that can help improve both the appearance and overall quality of the skin.

Gregory Beddell, MD

earned his medical doctorate from Northeastern Ohio Medical University in Rootstown, OH. He completed residencies in plastic surgery and general surgery at Summa Health Akron City Hospital in Akron, OH, followed by a

fellowship in head and neck surgical oncology at Memorial Sloan Kettering Cancer Center in New York, NY. He is board-certified in plastic surgery and general surgery.

Dr. Beddell's office is located at 715 Richland Mall, Ontario.

Call 567-307-7642 or scan the QR code to request an appointment.

Source: skincancer.org*

Groundbreaking Treatment for Sun Damage

Avita recently added BBL® HEROic™ technology as a treatment option for patients with sun-related skin concerns. This light-based treatment uses targeted pulses of light energy to gently heat the skin, helping to break up pigment, reduce redness, and stimulate collagen production.

This process can improve:

- Pigmentation and sun spots
- Redness
- Overall skin tone and clarity

Treatments are relatively quick, and many patients are able to return to their normal routine shortly after. For some patients, this can be a way to address visible signs of aging while also supporting long-term skin health.

Dr. Beddell's special interests include:

- Skin cancer treatment and removal, including melanoma.
- Head and neck cancer, including tumors of the salivary glands, neck, oral cavity, vessels, and nerves of the neck and endocrine glands.
- Body contouring procedures, including panniculectomy, abdominoplasty, and breast procedures.

5 THINGS TO KNOW ABOUT TYPE 2 DIABETES

Are you feeling more tired than usual or noticing changes in your weight and energy that don't quite add up? It's easy to attribute these concerns to everyday life, but for many people they can be early signs of Type 2 diabetes, a disease that often gradually develops over time.

5 Things to Know About Type 2 Diabetes

- 1. Blood sugar plays a key role in your energy.** When you eat, your body turns food into glucose (blood sugar) to use for energy. Insulin helps your body use the sugar properly. With diabetes, the body doesn't make enough insulin or doesn't use it effectively, which causes blood sugar to increase.
- 2. Early signs of Type 2 diabetes aren't obvious.** Type 2 diabetes often develops slowly. Some people notice fatigue, increased thirst, or more frequent urination, while others may not notice symptoms at all.
- 3. Prediabetes is common and often undiagnosed** as many people don't realize they are living with it. Blood sugar levels will be higher than normal, but not yet in the diabetes range. Without treatment, it can progress over time leading to Type 2 diabetes.

- 4. Daily habits have a real impact.** Activity, eating patterns, stress, and medications can all affect blood sugar levels. Making small changes, like being more active and adjusting your diet, can help your body use insulin more effectively and improve blood sugar levels.
- 5. Managing diabetes is an ongoing process.** Type 2 diabetes is a chronic condition, but it can be managed with lifestyle changes, medication, and regular monitoring.

Talk to Your Provider

It may be time to ask questions if you are experiencing any of the following:

- Ongoing fatigue
- Increased thirst
- Frequent urination
- Changes in weight
- Elevated blood sugar levels

Even subtle changes in your health over time are worth discussing. At Avita, patients can get answers, support, and ongoing care for their diabetic needs, making it easier to stay on track with their health and maintain their quality of life.

expanding Rheumatology Care

Avita Health System proudly welcomes Dr. Pamela Gonzalez and Dr. Natalie Yanes, expanding access to specialized rheumatology care for patients living with joint pain, autoimmune conditions, and chronic inflammation.

What is Rheumatology?

Rheumatology focuses on conditions that affect the joints, muscles, and immune system. These conditions can impact daily life, causing pain, stiffness, swelling, and fatigue. With early diagnosis and ongoing treatment, many patients can manage symptoms and maintain an active lifestyle.

Commonly Treated Conditions

- Rheumatoid arthritis
- Osteoarthritis
- Lupus
- Psoriatic arthritis
- Gout
- Ankylosing spondylitis
- Other autoimmune disorders

When to Seek Care

If you are experiencing any of the following, talk with your primary care provider. They can evaluate your symptoms and provide a referral if needed.

- Ongoing joint pain or stiffness
- Swelling or redness in joints
- Fatigue that doesn't improve
- Symptoms that come and go, but don't fully resolve

Avita's Rheumatology team

welcome **Pamela Gonzalez, MD**

Dr. Gonzalez earned her Doctor of Medicine from American University of the Caribbean in St. Maarten. She completed an internal medicine residency at Roger Williams Medical Center in Providence, RI, and a rheumatology fellowship at The Ohio State University Wexner Medical Center in Columbus, OH. She is board-certified in internal medicine.

welcome **Natalie Yanes, DO**

Dr. Yanes earned her Doctor of Osteopathic Medicine from Lincoln Memorial University – DeBusk College of Osteopathic Medicine, in Harrogate, TN. She completed an internal medicine residency at Palmetto General Hospital in Hialeah, FL, and a rheumatology fellowship at both Largo Medical Center in Largo, FL, and C.W. Bill Young VA Medical Center in Bay Pines, FL. She is board-certified in internal medicine and rheumatology.

Dr. Yanes provides care through telemedicine with patients visiting an Avita location where vital signs, lab work, and clinical support are provided in person. She joins via secure video to work with the on-site team, giving patients access to specialized care without long-distance travel.
